Profile Summary

Results-driven Software Developer with hands-on experience building and deploying full-stack web applications using React.js, Node.js, and RESTful APIs. Proficient in modern JavaScript frameworks, HTML5/CSS, and cloud platforms. Comfortable working in fast-paced agile environments, collaborating across business and tech teams to deliver intuitive, high-performance user-facing interfaces. Passionate about clean code, usability, and shipping impactful products quickly.

Technical Skills

Languages & Tools : Python, Bash, JavaScript, Java, SQL, HTML5/CSS3, CI/CD Pipelines, VS Code

Platforms & Frameworks : React.js, Node.js, RESTful APIs, Docker, AWS, MySQL, MongoDB(NoSQL), TensorFlow, Keras, Firebase

Concepts : Data Structures & Algorithms, OOP, DBMS, System Design, RESTful API Design, Agile methodologies, Gen-AI & Deep Learning

Projects

My Ledger - RBAC Financial Dashboard - *React, TypeScript, Firebase, Firestore* April 2026

- Engineered Role-Based Access Control (RBAC) using Firebase Auth and Firestore security rules, enforcing least-privilege access across user roles and eliminating unauthorized data exposure.
- Configured structured error logging and real-time Firestore read/write monitoring to surface data integrity issues and performance degradation proactively across user sessions.
- Deployed to Vercel with environment-isolated configurations, securing API keys via environment variables and maintaining zero-downtime releases — applying secure secrets management and SRE deployment hygiene.

Financial Time-Series Analytics & Forecasting Engine - *Python, TensorFlow, Keras, Scikit-learn* October 2025

- Delivered a 97.26% prediction accuracy hybrid ML architecture (RNN+LSTM+GBR) by designing end-to-end data pipelines with automated feature engineering on OHLCV + technical indicators (SMA, EMA, MACD, RSI), outperforming standalone LSTM baselines by 0.80%.
- Optimized model performance through iterative benchmarking, reducing RMSE to 7.99 — a 64% improvement over Linear Regression (RMSE 22.05) and 82% over SVR (RMSE 45.34) — validating results with automated regression test suites.
- Implemented automation scripts in Python to streamline model evaluation workflows and monitoring, enabling reproducible backtesting across historical time-series datasets at scale.

Podstream- Scalable Full-Stack Streaming Platform - *React.js, Node.js, MongoDB, Firebase* March 2024

- Led the full-stack design and deployment of a podcast streaming platform with responsive, user-friendly React.js interfaces and Node.js backend services, integrating RESTful APIs for seamless user profile management and content discovery.
- Implemented secure user authentication and session management using Google OAuth and Firebase, enforcing industry-standard web security best practices and eliminating unauthorized access vectors
- Optimized MongoDB aggregation pipelines and database query patterns, improving metadata retrieval efficiency by 30% and ensuring the backend services remained performant under growing user activity loads.

Education

Vellore Institute of Technology May 2026

B.Tech in Computer Science(Specialization in Cloud Computing and Automation)

CGPA - 8.47

Certifications

- AWS Solutions Architect** - *Ethnus*
- Applied Machine Learning in Python** - *Coursera (University of Michigan)*
- Supervised Machine Learning: Regression and Classification** - *Coursera (Stanford / DeepLearning.AI)*

Achievement & Leadership

- Placed **Top 5** at the Johns Hopkins Healthcare Hackathon (200+ teams), building a disease recognition system using ML and symptom analysis—demonstrating strong analytical problem-solving and the ability to deliver high-quality solutions under time pressure.
- Led cross-functional teams as **General Secretary** (Feedbox Club) and **Event Team Lead** (Entrepreneurship Cell, E-Cell), managing large-scale events with **1,000+ participants**.
